

- Create the scene for MainMenu
 1. Create a new scene (File > New Scene) and name it 'MainMenu'.
 2. Go to Hierarchy > Right-click > UI > Canvas (this will hold all UI elements).
 3. Inside the Canvas, add:
 - A Text (UI > TextMeshPro) for the game title.
 - A Button (UI > Button - TextMeshPro) for 'Start Game'.
 - Another Button for 'Quit Game'.
 4. Create a new C# script: 'MainMenu.cs'.
 5. Create an empty GameObject called "MainMenuManager"
 6. Attach C# script to 'MainMenuManager'.
 7. Select the 'StartButton' in the Hierarchy.
 8. In the Inspector, find the Button component.
 9. Under 'On Click ()', click the '+' button.
 10. Drag the 'MainMenuManager' object into the slot.
 11. From the dropdown, select 'MainMenu > StartGame'.
 12. Repeat for 'QuitButton', selecting 'MainMenu > QuitGame'
 - To add a background image:
 1. Right-click in the Hierarchy > UI > Image.
 2. Set the 'Source Image' in the Inspector (import an image if needed).
 3. Scale it to fit the screen.
 - To add sound effects:
 1. Add an 'AudioSource' to 'MainMenuManager'.
 2. Import sound files to 'Assets/Sounds/'.
 3. Add this to 'MainMenu.cs':
 - How to attach to our game
 1. Open File -> Build Settings.
 2. Click Add Open Scenes to add both MainMenu and the game scene
 3. Drag MainMenu to the top so it loads first.
 4. Modify the Start Button to Load Your Game Scene
 5. In the MainMenu script change this function to whatever your game is called
- ```
public void StartGame()
{
 // change gamescene to our game scene
 SceneManager.LoadScene("FPSGame");
}
```
- The FPSGame part, that's what I named my game
6. You can now build and run the game and the buttons should work
